                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a human epidermal growth factor receptor 1 (BGFR1). BGFR is a protein-tyrosine kinase receptor (PTKR). The specification describes a method for identifying genetically modified mammalian cells. The method uses a mutated PTKR nucleic acid which comprises a modification to the intracellular and extracellular domains, or comprises a modification to the intracellular and extracellular domains as a cell surface marker, and is useful for identifying genetically modified cells, especially immunoselection of transduced mammalian cells, mand for identifying mammalian cells expressing a protein of interest. The genetically modified marked cells may be used in an autologous or allogeneic setting e.g. gene therapy for bone marrow transplants, graft facilitation or immune reconstitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying genetically modified mammalian cells for use in e.g. bone marrow transplants, comprises use of mutated protein-tyrosine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3633 BP; 946 A; 1007 C; 953 G; 727 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; Fig 3; 63pp; English.

Deletions in the EGFR gene are found in many gliomas. breast tumours and lung tumours. The method is useful for diagnosing gliomas, breast tumours and lung tumours. The present sequence encodes a normal EGFR polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                    This invention describes a novel purified nucleic acid (I) (v-erbB related gene) specifically hybridizing to all or part of a MAC117 gene and not hybridizing to nucleic acid encoding an epidermal growth factor receptor. The product of the invention has anticancer and cytostatic activity. Antibodies to the protein encoded by (I) are conjugated to toxins and kill cancer cells expressing (I). Antibodies to the protein encoded by (I) are useful for the treatment of cancer. Fragments of (I) and the MAC117 gene are useful as probes for the detection of human mammary carcinoma or other malignancies resulting from the v-erbB related gene. This sequence encodes a human epidermal growth factor (EGF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; v-erbB; MAC117; epidermal growth factor receptor; anticancer; cytoStatic; toxin; cancer; treatment; detection; mammary carcinoma; malignant; EGF receptor; ss.

                                                                                                                                                                                                                                                                                                                                                                                           The sequence is that of the pRLDDDD3 construct which encodes the pridermal growth factor (BGF) receptor truncate protein LDDDD3ApaL baring BGF binding sites. The protein binds ligands of the EGF receptor without transmitting a signal for the growth and reproduction of a cell. It can be used as an adsorptive agent for any moletles that bind the EGF receptor as the portal of entry to a cell. It competes with the EGF receptor present on the cell surface for the binding of ligands and thereby inhibits the action of the ligands or prevents the entry of viruses into cells. It can also be used as for the EGF receptor itself, such as in the detection of abnormalities in mammalian cell growth. It is also useful for preps novel receptors for efficient detection of ligands and their anti-myonists or agonists. The features table in the appecification and that which the pRLDID2D3 DNA sequence given in the specification would encode.
                                                                                                                                                                                                                                                                                                             ery Match 77.3%;

The sequence is that of the pRLD203D4 construct which encodes the epidermal growth factor (EGF) receptor truncate protein in 102D3D4 having EGF binding sites. The protein binds ligands of the EGF receptor without transmitting a signal for the growth and reproduction of a cell. It can be used as an adsorptive agent for any moleties that bind the EGF receptor as the portal of entry to a cell. It competes with the EGF receptor present on the cell surface for the binding of ligands and thereby inhibits the action of the ligands or prevents the entry of viruses into cells. It can also be used as for the EGF receptor itself, such as in the detection of abnormalities in mammalian cell growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 misc_feature

The features table indicates the discrepancies between the LDDD3D4 protein sequence given in the specification and that which the pRLD2D3D4 DNA sequence given in the specification would encode.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This CDNA encodes a novel human epidermal growth factor receptor-like protein termed TEGFR. TEGFR is derived from human placenta. Fragments of the TEGFR CDNA can be used as a probe in a hybridisation assay to detect full length of TEGFR. An antibody can be produced using the antigen comprising at least the unique C-terminal sequence of the TEGFR polypeptide, optionally conjugated to an immunogenic carrier. The antibody can be used in an immunoassay to detect the polypeptide. The hybridisation assay and immunoassay to detect the polypeptide may hybridisation assay and immunoassay can be used in the diagnosis of human cancers. Antibodies and other inhibitors of the TEGFR polypeptide may also be used to treat hyperproliferative diseases including cancer.

The ERRP is highly homologous to the mouse EGFR and a truncated rat EGFR. The ERRP can be expressed by standar recombinant methodology. The ERRP acts as a EGFR receptor modulator. The ERRP converse of the ERRP converse o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1958 BP; 514 A; 524 C; 478 G; 442 T; 0 other;

The protein binds ligands of the ESF receptor without transmitting a signal for the growth and reproduction of a cell. It can be used as an adsorptive agent for any moletles that bind the ESF receptor as the portal of entry to a cell. It competes with the ESF receptor present on the cell surface for the binding of ligands and thereby inhibits the action of the ligands or prevents the entry of viruses into cells. It can also be used as for the EGF receptor itself, such as in the detection of abnormalities in mammalian cell growth. It is also useful for preps novel receptors for efficient detection of ligands and their anti-agonists or agonists. The features table indicate a discrepancy between the LD3D4 protein sequence given in the specification and that which the pRLD3D4 DNA sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oligonucleotides are useful for inhibiting the expression of inducible nitric oxide synthase in cells or tissues. In particular, the antisense oligonucleotides are useful for treating diseases or disorders associated with inducible nitric oxide synthase, e.g. diabetes, immunological disorder, cardiovascular disorder, neurological disorder or ischaemia/reperfusion injury. The antisense oligonucleotides are also useful for research and diagnostics. The present sequence is that of human inducible nitric oxide synthase (GenBank accession number 107868).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to antisense compounds, especially oligonuclacitides, which are targeted to a nucleic acid encoding inducible nitric oxide synthase and which specifically hybridise to and modulate expression of inducible nitric oxide synthase. The antisense compounds have immunomodulator, antidiabetic, cardiovascular, cardiant, neuroprotective, disorder and vasotropic activity. The antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 5484 BP; 1588 A; 1173 C; 1230 G; 1493 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for treating e.g. immunological, cardiovascular or neurological disorders, or ischaemia

                                                                                                                                                                                                                                                            HER4 is the fourth member of the EGFR-family of tyrosine kinases and is expressed in some human cancers and in some tissues of neuronal or muscle origin. HER4 polynucleotides, opt. labelled, are useful in assays (e.g. of HER4 mRNA to detect certain neoplasms, esp. breast carcinoma) and as primers in PCR or as probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          It was obtd. by assembly of cDNA clones that had been obtd. from human breast MDA-M8-453 and human heart cell libraries by PCR amplification using primers (see AAT18536-42) based on conserved exons from kinase domains of HER2, HER3, EGFR and Xmrk. Related sequences (see AAT18533 and AAT18535) were isolated from the MDA-M8-453 library. HER4 polynucleotides can be used in the prepn. of HER4 expression vectors, primers and probes to detect and/or clone HER4, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A DNA sequence (AAT18532) codes for a novel receptor tyrosine kinase, designated HER4/pl80erDB4 or HER4 (AAR91733), which is related to epidermal growth factor receptor and which is expressed in several human cancers and in certain tissues of neuronal and muscular origin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 111-116; 203pp; English.

It codes for an HER4 (AAR91734) that lacks the C-terminal autophosphorylation domain of prototype HER4 (AAR91733). A second alternative HER4 (AAR18534) sequence was also isolated. HER4 polynuclectides can be used in the prepn. of HER4 expression vectors, primers and probes to detect and/or clone HER4, and diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA encoding receptor tyrosine kinase, HER4 - related to human epidermal growth factor receptor, used for diagnosis and therapy of

                                                                                                                                                                                                                                                                                                                                                                    cancer, the initation step for Erb-B2 gene activity is identified. This method involves determining the presence of HPBF in a biopsy from the subject, where the presence of HPBF (relative to its absence in a normal control) indicates the presence of cancer and decreased chance of long-term survival. Binding of HPBF to the promoter can be inhibited using antisense oligonucleotides or a non-genomic nucleic acid that binds to HPBF; these oligos can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The Erb-B2 gene is one of the primary genes responsible for the transition of normal breast epithelial cells towards carcinoma in situ and the subsequent development of invasive and metastatic cancer. HPBF (see AAR77093-94), the Erb-B2 promoter binding prote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Her-2/neu; Erb-B2; c-erbB-2; oncogene; DNA binding protein; HPBF; Erb-B2 promoter binding protein; tumour enhancer factor; breast cancer diagnosis; prognosis; antisease oligonucleotide; retro virus vector; gene therapy vector; ss.
